Petition
Public Private Transportation Advisory Panel
April 2004

We, the undersigned residents of Dunn Loring, VA, are concerned about the HOT lane proposal currently being considered by the State of Virginia.

We acknowledge the State's need to consider transportation options to accommodate our region's growing population. However, we expect that the State will also consider the impact these changes could have on the quality of life of its residents and their private property.

If the State agrees to the Fluor Daniel proposal to build HOT lanes on I-495, we implore the State to require that the plan design include the erection of sound barriers. These barriers are essential to ensure that residents and homes bordering the Beltway will not be adversely affected by the HOT lane project.
