

Installing ProjectWise Edge onto Mobile Devices, VDOT Datasource

1. Install ProjectWise Edge application onto your mobile device from the app store. (This Job Aid was created using an I-Pad.)
2. Open ProjectWise Edge once installed, under Settings Tab, select Proxy and fill out as shown in images 1 and 2 below. Use your login credentials. Click the *Test Settings* button to make sure the data is entered correctly.

3. Once these settings are added, click the little barrel with a plus to add a datasource. Fill in the Server URL on "Connect to Repository" and select VDOT ProjectWise under Repository (the bottom information is already in place) (see image 3). Click *Continue* and Edge should appear as shown in image 4 below once you are successfully connected.
