Chapter I - GENERAL INSTRUCTIONS

SECTION 101 PURPOSE AND SCOPE OF MANUAL

The Materials Division of the Department of Transportation operates under the supervision of the State Materials Engineer, and in accordance with instructions from the Chief Engineer.

The Manual of Instructions for the Materials Division outlines specifically the practices for field sampling, inspection, testing, and control of materials incorporated in the construction or maintenance of highways, structures, bridges, and incidentals. These instructions are to be followed in order to achieve uniformity in the control and use of materials throughout the State.

The Book of Specifications and other contract documents (Supplemental Specifications, Special Provisions, Copied Notes, etc.), the Manual for the Materials Division, the Manual for the Construction Division, and the Manual for the Maintenance Division, are expected to cover the range of written instructions. There are to be no changes made in procedure as given in the Manual unless special written instructions are issued by the State Materials Engineer. Occasionally, more detailed supplemental instructions or procedures will be issued separately by the Materials Division that will only be covered generally in the Manual of Instructions, but will be considered as a part of the Manual so far as official procedure is concerned. Some examples of these are the Virginia Test Methods Manual, the Nuclear Moisture-Density Testing Procedure Manual, Guide for Statistical Quality Control, etc.
SECTION 102 MISSION AND GOALS OF MATERIALS DIVISION

The mission of the Materials Division is to assist the Department in building and maintaining a safe and efficient transportation system through the application of current materials engineering and testing procedures.

The goals of the Materials Division are to:

1. Provide preliminary engineering assistance to design units.
2. Establish the appropriate quality level for materials to be used in construction and maintenance.
3. Assure, through tests and observations that materials proposed for use by Contractors and Suppliers conform to contract and purchase order requirements.
4. Provide technical assistance to Field and Central Office operational Divisions in matters relating to the proper handling, use, and documentation of materials.

All materials purchased by the Department and all materials purchased by Contractors for use in construction and maintenance work must be approved by the Materials Division, or its authorized representative, before they may be used. On all projects involving Federal funds, the Materials Division must certify the quality and quantity of each type of material to the Federal Highway Administration before the final voucher is approved for payment. To this end, inspection is performed at nearly all asphalt terminals, aggregate quarries, etc., both within and without the State. In some cases, such as at steel and cement mills, materials inspection may consist of a program of Manufacturer's certification, coupled with periodic inspections of plant quality control procedures by Materials Division personnel. Special inspection can be promptly arranged in unusual circumstances where it is advantageous to the Department and to the progress of the work.
SECTION 103 INPUT CONCERNING MATERIALS DIVISION POLICY AND INSTRUCTIONS

Sec. 103.01 Improvement Recommendations
Criticisms or suggestions for improvement in Materials Division Policies and Instructions are invited. These should be made preferably in writing directly to the State Materials Engineer, or directed to the State Materials Engineer through the District Materials Engineer.

Sec. 103.02 Process for Revisions
The process for making changes to the Materials Division Manual of Instructions is intended to involve all elements that may be impacted by a change or revision. While no process can be entirely inclusive, as well as address every situation, the following approach is to be used as a baseline when making changes.

1. The idea/need for a revision or change is observed by any person.
2. A lead person (owner) of the change is identified and creates a draft.
3. The Assistant State Materials Engineer (ASME) is notified on behalf of the State Materials Engineer (SME) and recommends to pursue or not to pursue the change/revision. The ASME will track the progress of the proposed change, but the owner is responsible for ensuring all affected entities are involved in the development process and that the changes are consistent with Section 103.03.
4. Errors that are obvious and do not impact operations can be changed and a Materials Division Memorandum (MD) is issued.
5. Changes that affect other Divisions or industry, will be first drafted by the owner of the change, reviewed by the ASME, and then sent out to the affected parties for review and comments by the owner, this then becomes an iterative process until the document is complete. The MD is then sent to the ASME for review for issuance by the SME.
6. Changes that only impact the Materials Division are reviewed internally until the document is complete and then the MD is sent to the ASME for review before issuance by the SME.

To provide a succinct, visual depiction of the process, the following flow chart illustrates the process.
FLOW CHART
REVISIONS TO THE MATERIALS
MANUAL OF INSTRUCTIONS

Idea/Need for Revisions

Identify Lead Person/Draft Concept

Yes

Develop Correction

VDOT Reviews & makes changes

Finalize Wording

Send to ASME

Issue MD
Sec. 103.03 Issuance of Materials Division Memorandum

The Materials Division Memorandum, often referred to as an MD, is used to make modifications or changes to the Materials Manual of Instructions as well as, highlight those changes; it can also be used to convey information, direction and interpretation of policy that may not necessarily be in the Materials Manual of Instructions. The MD supersedes the portion of the Manual that has been changed. The MD will be posted on the Internet for a year, until the change is made in the Manual itself. MDs that are general communication will remain active indefinitely, unless there is a sunset clause.

The MD is issued on a template, and is only signed by the State Materials Engineer. It is assigned a number indicating the number of the memorandum and the year it was issued. For example MD 249-05 is the 249th MD that has been issued, and it was issued in the year 2005.

Changes that are made to the Manual are to be kept to a minimum. To preface the MD when changes are made, a summary of changes will be included. When changes are necessary, only the areas that need to be changed will be revised. In the text of the MD, it shall include the old section that is being revised, and the MD shall also include the new section to show what is being changed. The complete replacement of a section shall be avoided when possible. The old section will be shown as being lined out, the new section will be presented in italics and the existing section shall remain as is. This may be demonstrated as the example below:

Summary of Changes:
- Inclusion of Geologist’s recommendations for scour
- Revision of distribution of Bridge Coring (BC) reports

Revise SECTION 309 SUBMITTAL OF REPORTS second paragraph as follows:

For bridge site investigations, computer disk of CADD information, drill logs and reports will be submitted to the Central Office Divisions of Bridge Division Location and Design (Hydraulics Section) and Materials with the BC report, and the Materials Division. The BC report may address the potential scouring based on the Geologists’ historical knowledge of the behavior of the native soils to be found within the streambed.

The above paragraph shows what is unchanged by the normal text, the deleted section has the text that has been struck through and the new text is in italics.

All changes to the Manual of Instructions will be complete, including updating labels, references and indexes. Elements of a change that include units will have dual units, with English units being primary and metric units being secondary in parenthesis. The format of the changes will follow the existing format of the text. When new sections are added, the format will be Times New Roman size 12.
SECTION 104 RELATION OF MATERIALS DIVISION EMPLOYEES

Sec. 104.01 With Suppliers and Contractors
Relations of Materials Division employees with Suppliers of highway materials should be agreeably maintained at all times. Friendliness should prevail, but familiarity should be discouraged. The problems of the Supplier should be recognized. Advice can be offered that will assist in the production of acceptable materials, but the final choice or course of action is to be left to the Supplier.

Particular care should be taken not to issue any instructions to the Supplier, Contractor, his Superintendent or Foreman which can be construed as assuming superintendence of his work. Judgment should be cool, fair, and impartial, and arguments avoided. Knowledge of the work and material should be so thorough as to command respect. When differences of opinion arise, they should be referred to the District Materials Engineer or to the State Materials Engineer.

Instructions or orders for changes are to be given only to the Supplier, Contractor, his Superintendent, or his authorized representatives.

Employees should not place themselves under obligation to the Supplier or Contractor in any manner, as their judgment may be affected thereby, and their value to the Department seriously impaired.

Sec. 104.02 With the Public
Relations of Materials Division employees with the public are to be courteous and businesslike. Discussions of the policies of the Department of Transportation should be avoided. Employees of the Department of Transportation represent the State of Virginia in all their actions and duties. The motoring public expects our work to be accomplished in such a manner as to afford the greatest benefit and least inconvenience to their travel.
SECTION 105 SAFETY PRECAUTIONS

Personnel of the Materials Division are to follow rules of safety. A copy of the safety rules of the Department is given to each employee. The safety rules must be read, understood, and implemented at every level in the organization.

Sec. 105.01 Department Employees Visiting Plants
When employees visit plants to perform source inspection or monitor Quality Assurance operations, they are to comply with the safety rules applicable to that plant.

Sec. 105.02 Nuclear Safety Precautions
The VDOT Materials Division document Radiation Protection Program Manual for Portable Nuclear Moisture and Density Gauges, describes safety procedures to be used in handling these gauges. The manual is located on the VDOT Materials public webpage.
SECTION 106 GENERAL INFORMATION

Sec. 106.01 Information Required

(a) Estimated Quantities of Materials
Immediately upon the award of every construction contract, the District Materials Engineer, or his authorized representative, is to prepare a list of the estimated quantities of materials required for the execution of the contract and promptly make the necessary distribution of copies, as outlined in Sec. 800. The list shall show the estimated quantity of each item together with the specification designation.

When a loose-leaf type materials notebook will be used by the Project Inspector, the District Materials Engineer is to furnish the list of estimated quantities on loose-leaf sheets suitable for direct placement in the notebook.

See Chapter 7 for details in handling the materials acceptance and Materials Notebook program.

(b) Source of Materials
Contractors are to be advised by letter and/or verbally at the pre-construction conference that the Source of Materials form is to be submitted to the District Materials Engineer, Project Inspector, Project Engineer or other designee as a digital file. The Contractor should be provided with a computer diskette containing the digital file template(s) of the Scheduling & Contract Division's Form C-25 for use in listing the information to be submitted.

The District Materials Engineer’s office will, upon receipt of the contractor’s submittal, immediately determine the method(s) of acceptance for routinely encountered materials and/or material sources. The District Materials Engineer will forward portions of the submittal containing non-routine items to the Materials Division’s Central Office for processing. The Central Office of the Materials Division will handle the processing of non-routine items, including the notification and assignment of testing responsibilities to other internal divisions. The Central Office of the Materials Division will advise the District Materials Engineer of any noted deficiency regarding the information on the non-routine items. If, for any reason, the contractor's submittal is incomplete, incorrect or needs clarification, the Central Office of the Materials Division will return the Contractor's submittal to the District Materials Engineer for resolution of the problem. Upon resolution of such deficiency, the submittal will be returned to the Central Office of the Materials Division for processing. After processing, the submittal will be returned to the District Materials Engineer for final distribution.

The District Materials Engineer will send copies of the processed Source of Materials to the Project Inspector, Project Engineer, the Contractor, and any other District Materials Engineer who has been assigned testing/monitoring responsibilities. The Project Inspector should not approve the use of material until verification is received that the Source of Material has been processed or otherwise receives a processed copy.

PROCESSING MATERIAL CERTIFICATION SUBMITTALS

After a Source of Materials submittal has been processed and indicates that a Manufacturer’s Certification is required for material acceptance, the Project Inspector and Contractor are responsible for securing such documents and sending them to the District Materials Engineer for the Department’s review and approval. The District Materials Engineer is to review the certification documents for obvious omissions (such as lack of quantities or project numbers, etc.) and then submit four (4) copies of the documents to the Central Office of the Materials Division for technical review and processing. If the Contractor’s submittal is incomplete, incorrect or is in need of clarification, the Central Office will return the documents to the District Materials Engineer for resolution of the problem. Upon correction of the deficiencies, the District
Materials Engineer will return the submittal to the Central Office. The Central Office will then have the documents reviewed by the appropriate technical staff and, if found to be satisfactory, assign a certification number (i.e. a CT-xxxx number) to the submittal packages. The Central Office of the Materials Division will make the distribution of the copies of the approved Certification to the Project Inspector, Contractor and the District Materials Engineer submitting the documents.

(c) Job-Mix Formula and Mix Design

Mix designs are to be submitted in time to be approved prior to anticipated use. Hydraulic cement concrete mix designs and component materials sources shall be submitted on Form TL-27, while those for asphalt concrete and central-mixed aggregate shall be submitted on Form TL-127. A separate job-mix formula or mix design must be submitted for each plant production facility providing material for Highway use and for each such mix produced by each plant. In addition, for hydraulic cement concrete, a separate design must be submitted for each class of concrete and for each slump desired for each class to be used. The design is intended to be valid for as long as the material sources and quantities do not change and as long as the material continues to perform satisfactorily. Small changes in quantities for moisture adjustment, etc., are not to be considered sufficient reason for a new mix design. A separate design is to be submitted for any significant change made.

Each approved design is to be assigned a design number which should be referenced on the Contractor's source of materials form. The assigned number should include the District number, serial number, and the year of approval.

In the case of hydraulic cement concrete and asphalt cement used in asphalt concrete, Contractors should be advised that Form TL-27 and TL-127 respectively are considered as substitutes for the source of materials letters required in Paragraph (b) above. It will not be necessary that a separate source of materials letter, in addition to these forms, be submitted, listing the sources of the asphalt cement and the individual components of hydraulic cement concrete.

(d) Shipping Instructions to Producers

When orders for the shipment of highway material are placed directly with the Producer, it is necessary that the Producer be given the route, project, and the county to which the material is to be charged.

Sec. 106.02 Sampling of Materials in the Field

The District Materials Engineer is to maintain supervision over the taking of samples in the field for submission to the Laboratory for testing. (See Sec. 201.) No person should take samples unless properly instructed.

When instructing subordinates, the Engineer should emphasize the importance (1) of submitting representative samples from all shipments of materials not bearing evidence of having been tested and approved, (2) of submitting such samples promptly, and (3) of submitting along with the sample all required information pertaining thereto correctly and in legible form.

Sec. 106.03 Compliance with Specifications

It is necessary that materials Suppliers and Contractors be advised that they are expected to produce materials meeting approximate mean values, where maximum and minimum limits are given in the specifications. This applies especially to such materials as asphalt concrete, aggregate base, and subbase material, etc. It is recognized that most materials contain some fluctuation and variation, and tolerances have been provided to allow for this.

Where materials Suppliers consistently produce borderline material directed toward the outer limits of the specification tolerances or falling outside of specification tolerances, they should be advised of the
necessity of producing a uniform specification material. This may require that the Producer initiate
adjustments in materials production, based upon quality control determinations to minimize the frequency
and severity of deviation from the center of the specification or job-mix range.

A refusal on the part of the Contractor to comply with a request to initiate adjustments in materials
production or to revise the design to meet specification requirements, will be justification for the
Department to suspend its approval of the plant as an approved source, until such time as the requested
corrections in production have been made or a new job-mix has been approved. It should be pointed out
to the Producers and Contractors that compliance with specifications will eliminate, to a great extent,
failing test results and will reduce the necessity for price adjustments.
SECTION 107 SCALE PROGRAM

Truck and hopper scales used in weighing material for Department work are to be certified and sealed, as outlined in the Road and Bridge Specifications. Batch test weights are also included in this policy. The District Materials Engineer, in whose area the plant is located, will be responsible for initiating these instructions.

Sec. 107.01 Certification of Batch Test Weights

The 10 fifty-pound (225 kilogram) batch test weights are to be calibrated and certified, as outlined in the Road and Bridge Specifications.

Test weights having drilled or formed holes, other than the adjustment cavity on the sidewall, are not acceptable. The likelihood of dirt, cement, asphalt, or other foreign material accumulating in the holes makes this type of test weight unsatisfactory for plant use.

Test weights, in order to be certified, must conform to Weights and Measures’ requirements for a Class C test weight. Such weights must have a sealing cavity for calibration, and the cavity must be of such design that its opening can be readily capped and sealed. Additional information is available upon request from Weights and Measures concerning sources where acceptable test weights may be purchased.

Sec. 107.02 Certification of Scales

(a) The following instructions will cover all situations requiring the sealing of scales, but will not be limited necessarily to the following situations:

(1) When plants and scales are initially set up.

(2) When scales are moved from one location to another.

(3) When there has been more than seven months since the last inspection by the Office of Product and Industry Standards (OPIS) / Virginia Department of Agriculture and Consumer Services (VDACS) or an approved private scale service company.

(4) When scales are suspected or determined to be out of tolerance or adjustment at anytime during operation, regardless of when previously sealed.

(b) The following procedures should be used in obtaining compliance with scale certification requirements:

(1) The Scale Owner, whether it be the Material Producer, Supplier or Contractor, shall determine the date on which the scale will be needed. Should inspection and sealing of the scales be required under any of the four above noted conditions, then the Scale Owner shall contact a scale service company licensed by (OPIS) / (VDACS). The scales are required to be inspected twice per year. A producer may use an OPIS/VDACS inspection as one of the required inspections however it is the producer’s responsibility to obtain the service of a private scale company when OPIS resources are not available. There shall be no less than six to no more than seven months between inspections to assure the scales are in compliance with specifications. Scales that have not been inspected within the time frames requested without a substantial reason can be considered to be out of tolerance, therefore no more materials will be purchased without review.

(2) The scale manufacturer's representative or repairman will have a definite Scale Technician Service and Test Report that has been established or approved by Weights and Measures, to follow when checking the scales.
(3) One copy each of the Scale Technician Service and Test Report, when properly filled out by the scale repairman, shall be given to the scale Owner and Weights and Measures. The scale Owner shall be responsible to see that the District Materials Engineer receives the copy so designated. This must be signed by the person inspecting the scale, and must indicate whether the scale is satisfactory or unsatisfactory for use, in accordance with the requirements of National Institute of Standards and Technology, Handbook 44, corrected through the current year. The scale Owner's copy of the report is to be posted in the scale house or in the office close to the scales, where it is readily available to anyone desiring to refer to it.

(4) Scales shall not be placed in, or returned to, service by a scale repairman, unless it meets all requirements of National Institute of Standards and Technology, Handbook 44, outlined in Item 3 above (also see Item 6). When scales have been "tagged" rejected or condemned by Weights and Measures, only they can remove the tag and return scales to service.

(5) Scale repairmen must have and use at least 500 lbs. (225 kg) of test weights on hopper type scales and at least 20,000 lbs. (9050 kg) of test weights on motor truck scales. Strain load tests shall be conducted when scale capacity exceeds the test weights used.

It is the intent that the 20,000 lbs. (9050 kg) of test weights used on motor truck scales be transported on a single truck, whose vehicle weight combined with the test weights will approach the range of loads being weighed on the scales.

The sections of the vehicle scales should be checked at increments up to and including 20,000 lbs. (9050 kg) using the test weights. Next, the sections should be checked with the test weight transport vehicle and a load of 20,000 lbs. (9050 kg) of test weights. In the event the combined weight of transport vehicle and test weights is less than 44,000 lbs. (19,950 kg), an empty or partially loaded truck which weighs approximately the same as the combined weight of the transport vehicle and test weights is to be weighed and test weights added to the scale platform to bring the total load to 44,000 lbs. (19,950 kg) or greater.

District Materials representatives should review scale service reports and/or occasionally observe a 6 month service check to assure themselves that 20,000 lbs. (9050 kg) of test weights are being used, that sections of the scale are being checked both with 20,000 lbs. (9050 kg) of test weights and with the combined weight of the transport vehicle and 20,000 lbs. (9050 kg) of test weights, and that a gross platform load of 44,000 lbs. (19,950 kg) or greater is being used.

(6) If Weight and Measures can test and approve the scale prior to date of use or date of seal expiration, ignore the remainder of Items 6 and 7, and proceed to Item 8 for further instructions.

If Weights and Measures cannot test and approve the scales prior to the date of seal expiration, or the anticipated date of use of new or newly relocated scales, the District Materials Engineer may issue temporary approval for use of scales. In making this approval, the District Materials Engineer shall determine whether a conscientious effort was made by the scale owner to obtain the services of Weights and Measures prior to expiration of seal or date of use.

For temporary scale approval to be issued, the following actions must occur:

a. The scale owner shall request by letter to the District Materials Engineer for an extension of time.

b. The scale owner shall provide a signed Scale Technician Service and Test Report, indicating that the scale meets the requirements of Handbook 44. The inspection should have been performed within the last thirty (30) days.

c. The District Materials Engineer shall notify the scale owner in writing of temporary approval.
The scale must be inspected and sealed by Weights and Measures as soon as possible if the scale owner expects to continue using the scale.

(7) If the report indicates that the scale does not meet the requirements of Handbook 44, the District Materials Engineer will immediately notify the scale Owner by phone, and confirm by letter, that the scale has been taken out of service for Department work, until it has been properly repaired by the appropriate repairman and approved by Weights and Measures.

(8) Weights and Measures will give appropriate advance notice as to when they will check the scales. It is suggested that the scale Owner have the scale repairman who serviced the scale present at the specified time, to correct any minor deficiency immediately while the Weights and Measures official is present. The Weights and Measures official will not wait until major repairs are made, or if minor repairs require an unreasonable length of time to accomplish. The scale Owner will be responsible to see that the District Materials Engineer receives a copy of the Scale Inspection Report issued by Weights and Measures.

(9) If the inspection by Weights and Measures reveals that the scales are not functioning properly and if the necessary repairs or adjustments cannot be made by the scale repairman immediately, the District Materials Engineer will then notify the scale Owner by phone, and confirm by letter, that the scales have been taken out of service for State work until properly repaired and then sealed by Weights and Measures. No additional temporary approval will be given.

(10) Copies of all correspondence and reports outlined in Items 6, 7, 8, and 9 above will be sent to, or retained by, the State Materials Engineer, Administrative Services Officer, and District Materials Engineer. In cases which involve a contractual dispute, copies of all correspondence and reports noted in Items 6, 7, 8 and 9 will also be sent to the Construction Engineer and Residency Administrator involved.

Sec. 107.03 General Scale Requirements and Check Points
The following is some helpful information regarding scale accuracy:

(a) Single Draft Weighing
The length of a vehicle scale must be adequate to accommodate in its entirety the longest vehicle or vehicle combination. The total weight of a vehicle or combination is not to be determined by adding together the results obtained by separately and not simultaneously weighing each end of such vehicle or individual elements of such couple combination. The weight of a couple combinations may be determined by uncoupling the various elements (tractor, trailer), weighing each unit separately as a single draft, and adding together the results.

(b) Scale Platform
The scale platform should be of adequate strength. The surface should be reasonably smooth and in surface alignment with the pit coping. The opening between platform and coping should be approximately 25 mm, to prevent lodging of foreign matter between platform and pit wall. The surface should be kept in good repair, and cleaned when necessary or at least once a day.

(c) Scale Pit
The pit wall, floors, and piers for lever stands should be of good quality concrete. It is imperative that there be periodic cleaning, good pit drainage, and ventilation. Adequate room should be provided so that the inspector or repairman can move about the pit freely. The pit should be deep enough, and access thereto should be such, as to facilitate inspection, cleaning, and maintenance of scale parts.
(d) Elements in Pit
All stands should be set on concrete and securely anchored. All elements should be in alignment and level if so designed, with adequate clearance around live parts. Pivots and bearings of the main and extension levers should be well packed with grease to protect the parts against corrosion. All elements, levers, and structural steel should be painted periodically to minimize rust hazards. The weighbridge should be of steel, adequately strong to prevent deflection.

(e) Indicating Elements
Indicating elements should be rigidly mounted upon firm foundation, independent of the scale house, weighing room, or other similar structure. Adequate clearance must be provided around the indicating elements and the connections. On beam type truck scales, all connections not above the beam stand must be enclosed. Keep weighbeam bars and face plates in clean and legible condition. Keep automatic elements clean and the dash pot properly filled with oil. See that the poises on the notched weighbeams have pawls that fit the weighbeam notches, and that the spring-loaded weighbeam poises are strong enough to seat the pawl properly in the weighbeam notches. See that the poises on the weighbeam, tare bar, frictional bar, and tare bar on automatic - indicating scales, when they are pushed as far as they will slide in the zero direction of the weighbeam, give a correct (zero) indication. Any loose material used for the purpose of balancing the weighbeam must be secured so that it cannot shift or be knocked off, thus affecting the balance condition of the scale. See that the weighbeam is centered in the fulcrum stand bearing and pivots in loops, and that, when weighbeam is correctly balanced in center of trig loop, the amount equal to two (2) minimum graduations on the weighbeam will hold the weighbeam to the top or bottom of the trig loop. See that the operations of application and removal of unit weights are positive, and that the value of the unit weights in place at any time is clearly indicated on the reading face of the dial.

(f) Correct Balance
Keep the beam scale-weighbeam tip in center of trig loop with all poises at zero. The automatic scale indicator on dial face must be pointing to zero, and the printer dial reading must indicate zero. Zero balance should be checked after each five (5) drafts or more often if conditions tend to change the weight of the platform.

(g) General
A scale is not to be used for weighing a load totaling more than the capacity indicated on the scale by the manufacturer. Weighmasters must have an unobstructed view of the entire scale platform. The indicating elements, the lever system, and the underside of the load receiving elements of a scale shall be adequately protected against wind and weather effects.

(h) Temporary Test on Truck Scales
Acquire correct (zero) balance, place loaded truck on scale platform with rear wheels about .25 m from the end of platform, obtain correct amount, and record. Place truck on other end of platform in same manner and repeat the operation. Both ends should be within 2 lbs. (1 kg) per 1000 lbs. (500kg) of gross load of truck.

(i) Temporary Test on Hopper Scales
Acquire correct (zero) balance, making sure that all live parts of the scale are free from a binding condition. Distribute test weights on hopper and record amount indicated. This amount should be within 2 of the minimum graduations on the indicating element. On hopper scales, consideration should be given to suitability of position of the indicating elements, freedom from vibrations, disturbing air currents, and easy accessibility to facilitate daily cleaning of live elements of the scale.
(j) Documentation of Scale Checks
When District Materials personnel make a routine accuracy check of plant truck and hopper scales, the scale inspection should be documented showing the date of the inspection and whether or not the scales appeared to be accurate. If any inaccuracies in scales are evident, the particular details of the discrepancy should also be noted. The procedure for checking a set of truck scales begins with a quick visual inspection of the scales to see that material is not jammed into the areas around the platform or below the scales which would affect the weights. The readout unit is to be inspected for a proper “zero” and, if digital, that the readout unit has a seal on it to prevent tampering with adjustments inside.

Sec. 107.04 Recordkeeping and Scale Certification Data System
The Department has agreed to the following initiatives which are intended to assist Weights and Measures in providing their service to suppliers of VDOT. In addition, this system is a means of standardizing recordkeeping for the Bonded Weigh Program as a whole.

VDOT employees are not to contact representatives of Weights and Measures to request the sealing of scale. Requests must originate with a producer billing procedure. However, District Materials representatives are encouraged to develop a good working relationship with the regional VDACS inspectors responsible for his/her respective producer scales.

The Central Office of Weights and Measures should be contacted by our producers to request the scheduling of the scale sealing operation.

Each District is to furnish Weights and Measures inspectors in their region a list of in-state producers and the status of the service/sealing activity for the scales involved. The "Agriculture Report" (See Appendix No. I-B is an extracted report from the "Certified Scale Status Report" data base for the District. This report is to be issued at least once each 6 months and quarterly if practicable. District Materials representatives are to remind aggregate and hot mix suppliers of upcoming expiration of Weights and Measures certification. This courtesy reminder is to be given at least 4 to 6 weeks prior to the expiration date.
SECTION 108 BONDED WEIGHPERSON PROGRAM

The Department requires Contractors and Producers who furnish material by weight to have a certified and bonded Weighperson perform the weighing operations for such material furnished for State work. The District Materials Engineer is responsible for monitoring the Bonded Weighperson program.

Sec. 108.01 Surety Bond

The Weighperson's surety bond shall be issued in the name of the Producer's firm, rather than in the name(s) of the Weighperson(s). The Weighperson or other company representative shall see that a legible, physical or electronic copy of the surety bond is submitted to the District Materials Engineer, in whose District the shipping source is located. Upon expiration or any material changes, a legible physical or electronic copy of the continuation certificate or new bond shall be submitted to the District Materials Engineer. Continuation certificates shall indicate the exact name and bond number as the original surety bond. The Weighperson shall post his/her bond at the work area for ready reference of the District Materials Representative (See Sec. 800 for a sample surety bond).

Sec. 108.02 Certification of Weighperson

The District Materials Engineer or representative will meet with each proposed Weighperson to verify that the person is bonded, and understands and has the ability to follow VDOT specifications. The evaluation will be made on the basis of an oral evaluation utilizing the standardized questionnaire provided by the Central Materials Office:

(a) The Weighperson Evaluation Form

This form is not intended to be used as a numerically graded examination of the candidate. District Materials representative will provide each candidate a copy of the Weighperson Training Manual from which the questions are based. The candidates are to be allotted an appropriate amount of time to review and study this information prior to being orally quizzed on the material. If a candidate has problems recalling the answers to the questions, the District Materials representative should prompt or coach the candidate to a reasonable extent. However, if in the opinion of the representative, the candidate needs more study time to better prepare for the evaluation, an additional amount of time may be allowed before retesting. Upon successful completion of the Weighperson Evaluation, the District representative shall recommend the issuing of a Weighperson Certificate by the District Materials Engineer. The signed Weighperson Evaluation Form will serve as a record and documentation of qualifications. The weighperson will be evaluated at the weighing facility at where he/she is employed and evaluated in accordance with the requirement for the equipment he/she will be utilizing in the weighing process.

VDOT suggests the number of employees certified at an individual facility be limited to one (1) full time weighperson with one or two (2) persons serving as backup. The number may vary according to conditions that may occur in high production facilities. However, the number of active weighpersons should be kept in line with the production demands of a facility.

By limiting the number of employees VDOT certifies, VDOT can exercise more control over the Bonded Weigh Program and the amount of monitoring required at each facility. In addition, it is not good practice to encourage the producer to have numerous people certified who are not actively participating in the weighing operation. This effort would tend to protect the producer as well as the State by encouraging reliance on persons who are more thoroughly versed and familiar with the weighing process.

For each certification issued by the District, there shall be a corresponding Weighperson Evaluation Form on file in the District Office for the individual. The Department reserves the right to withdraw the certification of a Weighperson at any time during the term of the certificate if the performance of duties is not deemed satisfactory.
Upon satisfactorily demonstrating that ability, the Weighperson will be certified by the District Materials Engineer. A copy of the Weighperson's certification also shall be posted for ready reference of the District Materials representative. (See Sec. 800 for details of a sample Certification.) This certification will remain in effect as long as the Weighperson is actively participating in the weighing operation (does not exceed a period of 120 days without actually performing the weighing operation). The Producer is to notify the District Materials Engineer in the event a weighperson is used who has not performed the weighing operation within 120 days.

Following are listed particular items that will be reviewed by the District Materials Engineer or representative during the course of the examination of the Weighperson:

1. Demonstrates ability to properly perform weighing operations.
2. Demonstrates ability to prepare tare weights.
3. Demonstrates and/or explains the system the Producer uses to identify lots and keep up with the running totals.
4. Demonstrates an understanding of the Daily Summary Sheet, Form TL-102A. Explains how the sheets will be delivered to the projects, orders, etc.
5. Has posted a copy of Surety Bond.
7. Knows who to contact in the VDOT in case of problems.

**Sec. 108.03 General Guidelines for Weighperson**

Following are general guidelines for Weighpersons:

1. See that trucks are properly tared and in compliance with specifications and instructions.
2. Assure that all weights are true and correct.
3. Post Certification, Surety Bond, and a current Virginia Weights and Measures Scale Inspection Report. (See Sections 108.01, 108.02 and 107.02.)
4. Maintain accumulative tonnage for lots and (IAS) Q.A. sampling.
5. Submit Daily Summary Sheet, Form TL-102A, in accordance with specification requirements. (See Sections 108.04 and 800.)
6. Provide information to the Department's (IAS) Q.A. Monitor and assist with spot-checks.
7. Comply with all pertinent specifications and instructions.

**Sec. 108.04 Duties of Certified (Bonded) Weighperson**

Following are specific duties of Weighpersons performing weighing operations for material shipped to State work:

(a) **Scale Operation**

1. Must be zeroed and platform clean before weekly taring, and must remain so while material is hauled to State projects or purchase orders.
2. Must have current seal of Virginia Department of Agriculture and Consumer Services, Bureau of Weights and Measures. Must also have been tested within the last 6 months. (See Section 107.02)
In case of scale malfunction, notify the District Materials Engineer or his/her representative.

Weighperson is to assist VDOT representative in performing checks of scales.

**b) Taring Trucks**

1. The truck tare weight to be used in the weighing operation will be the weight of the empty truck with full tank(s) of fuel and the driver seated in the truck. The tare weight is to be recorded to the nearest 20 pounds (10 kg).

2. For routine taring, the Weighperson shall tare each truck at least once a week during periods of materials shipment to State work. At the option of the Contractor, a new tare may be determined for each load. In that case, the requirement for full tank(s) of fuel will be waived and the most recent tare is to be used to determine net pay quantity.

**c) Weigh Ticket Information**

1. Weigh ticket is to accompany each load and is to include plant (company) name and location, date, load number, size and type of material, project, schedule, or purchase order number, and lot number and/or aggregate certification when applicable.

2. For truck scales, tickets must include 2 printed weights, one of which must be the NET WEIGHT. For hopper scales, tickets must include the printed NET WEIGHT.

3. Weighperson's signature (either handwritten signature, handwritten initials, or computer printout of name or initials) certifies that the truck has been properly weighed and that weights are correct. Tickets are not to be presigned.

4. Tickets are to be checked for proper weights and completeness of information.

5. When an error is found on a weigh ticket, the weighperson shall issue a manual (reprint) ticket, handwriting “Reprint” on it and circling or underlining the information that was corrected and issue this to The Department promptly.

**f) Daily Summary Sheet (Form TL-102A)**

Weigh person is to furnish a Daily Summary Sheet (Form TL-102A), which is developed on the "Producer Lab Analysis and Information Details” PLAID website https://plaid.vdot.virginia.gov, for each order and/or contract. One TL-102A will be issued for each day of production per material/job mix shipped to state projects and purchase orders. The summary sheet shall contain all pertinent information, and shall be delivered to the person receiving the weigh tickets at the project or work area by the end of the next working day, or in accordance with the agreement made with the Department’s representative receiving the material. The Daily Summary Sheet shall be submitted through PLAID and delivered in person or electronically delivered for acceptance of materials being shipped. (See additional detail in Section 108.05.)

**Sec. 108.05 Reconciling Weigh Documents**

The person receiving the Daily Summary Sheet (Form TL-102A) shall reconcile it against the weigh tickets received at destination. If there are differences, they should be corrected or explained. The Producer or Contractor shall be notified of any differences between the quantities shown on the Daily Summary and the weigh tickets.

The Daily Summary Sheet shall be turned in at the completion of a project to the District Location & Design Section, who will check it against the final estimate and the weigh tickets. Upon completing the final estimate, the Daily Summary Sheet shall be retained in the project files, in accordance with
published retention schedules. For H-Orders, the Daily Summary Sheets will be sent to the State Materials Engineer after final checks by the Residency Administrator’s office.

Sec. 108.06 Department Monitoring

The Department will monitor the certified Weighpersons and plants furnishing materials by weight on a continuing basis, with a minimum of one (1) inspection per calendar quarter per plant, or more often if needed. Where significant discrepancies are found, follow-up inspections and reports should be made within 30 days of the original inspection. Where found, discrepancies shall be corrected immediately by the Weighperson, before allowing hauling to resume. The "Weighing Inspection Report" (Appendix No. I-A) shall be retained in the District for documentation with a copy going to the State Materials Engineer. In addition, the District Materials representative shall instruct the Producer to notify him/her when a less experienced temporary Weighperson is going to be used. This will give the District Materials representative an opportunity to visit the plant and review weighing and documentation procedures with the temporary Weighperson prior to weighing operations.

The District Materials Engineer, through the District Materials representative, will be responsible for conducting the weigh inspections. Following are listed items that are to be inspected or reviewed during the District Materials representative’s visits:

1. Check scales, printer system, and weighing operations.
2. Check Weighpersons for knowledge of applicable specifications.
3. Check delivery tickets for proper weights and information, including tare weights and lot numbers.
4. Check on posted certifications and bonds. (Dates, frequency, etc.)
5. Check scale seals (proper dates) and Weighperson’s Surety Bond.
6. Check to see if Summary Sheets (Form TL-102A) are being handled properly. (See also Section 108.04 and 108.05.)
7. Keep a diary or file on each Supplier, to include dates checked, copy of bond, corrections required, copy of certification, and instructions given, etc.

It is recommended that VDOT trucks continue to use E.D. number as truck I.D. number.
SECTION 109 THE DISTRICT MATERIALS ENGINEER

The District Materials Engineer is a field representative of the Materials Division and represents the State Materials Engineer in matters pertaining to the sampling, inspection, field testing, and use of all construction and maintenance materials. The Materials Engineer will assist the Division in the making of materials and performance surveys, and in any other materials assignment or duties outlined herein or by special request. He receives administrative supervision from the District Administrator and technical supervision from the State Materials Engineer.
SECTION 110 DUTIES OF MATERIALS TECHNICIAN SUPERVISORS AND TECHNICIANS

Materials Division technicians shall have the primary responsibility of carrying out any assignments related to materials sampling, testing, or inspection, or any functions related thereto, as may be directed by the Materials Engineer to whom they are assigned. Materials Division technicians will receive both administrative and technical guidance from the work unit to which they are assigned, either the Central or District Laboratory, as the case may be.
SECTION 11 OPERATIONS OF THE MATERIALS DIVISION

The operation of the Materials Division in the inspection and acceptance of materials generally takes three distinct administrative forms; that is, plant testing, laboratory testing, and visual or modified inspection, or a combination of these. Plant testing or inspection usually means that acceptance testing or inspection is conducted at the materials source, and may include such materials as asphalt concrete, pugmilled aggregates, or open graded aggregates. Plant inspection may also be coupled with additional laboratory testing and/or visual inspection before acceptance of materials is obtained, which would include such materials as pipe, asphalt materials, and again aggregates in certain situations. Each form of materials acceptance is covered in more detail below.

Sec. 111.01 Plant Testing and Inspection

Whenever it is economically advantageous, material for highway use may be inspected, sampled, and/or tested at the manufacturing plant or point of origin of shipment by the Materials Division, or its authorized representative. Shipments, in this case, will be sealed or otherwise marked to indicate that such inspection has been made. If facilities are available at the source, acceptance testing of the material may be performed at this point, or if unavailable or only partially available, the acceptance testing will be performed at another laboratory.

In any case, plant inspection is not infallible and any material, which on arrival at destination does not appear to meet the specification requirements, will be subject to retest or reevaluation, and acceptance or rejection will be based on the results of the retest or reevaluation. (See also Sec. 110.07.)

In addition, certain materials shipped by truck and paid for on a tonnage basis, such as asphalt concrete, dense graded aggregates (aggregate base, subbase, and select material), and other aggregates (fine aggregate, open graded coarse aggregate, and crusher run aggregate), used on construction projects and maintenance schedules, will normally have acceptance weight documented at the source. This does not apply to aggregate used in asphalt and hydraulic cement concretes or masonry. When any of the applicable above noted materials are shipped from the Producer to the job site, the bonded Weighperson will record the pertinent data of material shipped on Form TL-102A. It will also be necessary that these source documented materials be accompanied to the delivery point by a weigh ticket furnished by the Producer, as outlined in Sect. 106.04(e) and 800.

Sec. 111.02 Laboratory Testing

Laboratory testing includes any testing performed in a District or Central Office Laboratory of the Materials Division. This testing may be performed for various purposes; such as, acceptance testing, Q.A. monitor testing, routine quality testing, check testing, independent assurance testing, and other purposes, including release of shipments of approved materials by source Inspectors.

While District Laboratories are responsible for their own internal inspection, the appropriate Central Office Laboratory conducts inspections of all District Laboratories annually. The District Quality Review Checklist (TL-138) provided in Section 800 will be used by Central Office Laboratory personnel for review of District Laboratories that are AMRL/CCRL accredited.

Sec. 111.03 Visual Inspection

Visual inspection at the job site is to be conducted on all materials, regardless of whether previously approved or not, as outlined in Sec. 110. However, the term "visual inspection" also has another meaning in regard to materials acceptance. There are certain materials that, under certain circumstances, may be accepted at the job site on the basis of modified inspection, requiring only visual inspection or visual inspection supplemented with Manufacturers' certifications and/or occasional check testing by the Department. Normally, these cases will not require Department material test or inspection reports for acceptance.
These circumstances include (1) very small quantities of uninspected or untested material received on a project, not in sufficient quantity to permit a test sample to be taken without causing a shortage of the material; (2) certain materials outlined in Sec. 207 received in amounts not exceeding those amounts specified for the individual materials, such as brick and paint, among others; (3) certain materials, such as admixtures, aluminum alloys, hydraulic cement, steel guardrail, lime, and others, that may be accepted on the basis of Manufacturer's or Producer's certifications, mill analyses, annual published lists, or other certifying documents; (4) certain materials outlined in Section 207 when used on certain projects outlined in Chapter 7 (5) certain materials that require no sampling, testing or certification for approval, such as, monomolecular film and copper water pipe, among others. The materials which may be accepted on this basis are covered in more detail in the individual material sampling and testing instructions in Sec. 200, and in a condensed list in Sec. 207.
SECTION 112 MATERIALS

Sec. 112.01 General

Materials received in the field, whether for contract work, force account work, or maintenance, are to be covered by a test report, inspection report, certification, or visual inspection. If such reports are not received (within 3 calendar weeks) after the material has arrived on the job, or if the information given on the report does not agree with the description and quantity of material received, the Materials Division must be notified without further delay through the District Materials Engineer. The Inspector or Foreman who has been assigned to receive the materials is to carefully examine all materials as they are received. Any visible evidence that the material is not suitable for use and in accordance with specification requirements must be reported to the District Materials Engineer immediately, and the use of the material delayed pending instructions.

In addition, material delivered from the Producer to the job site will be accompanied by delivery tickets, invoices, or weigh tickets. Material received without this documentation should not be used until such evidence is produced. One copy of this ticket must be obtained by the Inspector for materials delivered to the project and, in the case of tonnage materials, signed by the Inspector. The Inspector should hold this ticket until completion of the project, and until he has checked to determine that the specific material and quantity has actually been delivered to the project, and until he has received the above noted materials test or inspection report to cover the shipment. The delivery ticket should be kept in a safe place on the job until completion of the project, at which time they should be forwarded to the project files.

In the case of materials shipped to the job site by truck and paid for on a tonnage basis, the documentation will be accomplished by retaining the weigh tickets and Forms TL-102A, as outlined in Sec. 800. See also Sec. 106.04(e). In the case of automated asphalt plants, the printed ticket will be used in a similar manner to a regular weigh ticket.

All producers of materials which are produced under a Quality Control - Quality Assurance Plan will have written documentation of their Quality Control plan. The documentation will include, among other things, the quality control functions, frequencies, and state the personnel designated the responsibility for the various Quality Control functions, and the designated personnel with authority to sign the certifications stating that the materials are produced in accordance with the Quality Control plans. Test reports and inspection documents supporting the conformance to specifications must be signed by the QC personnel performing the testing, or inspection.

It is imperative that extremely close communication be maintained between the plant and the project, in order that entries on project and plant records will be in agreement.

a) Quality Assurance Program for Acceptance of Misc. Materials by QA Suppliers - Under this, program suppliers will have approved Quality Assurance Plans, which define how they intend to maintain all shipping records, inventory records, test report numbers, and other documents needed to assure that materials shipped have the proper acceptance documentation. The Plan will define the responsible parties, and describe when, where, and how the records are maintained. The Quality Assurance Plan will be reviewed for content by the Central Office, Quality Assurance Section. The Quality Assurance Engineer is responsible for the acceptance or rejection of the Quality Assurance Plan in accordance with the Quality Assurance Plan Checklist found in Appendix I-F of this chapter. The Quality Assurance Engineer shall be responsible for the supplier’s adherence to the approved Quality Assurance Plan and has the authority to remove non-compliant suppliers from the list. The approved suppliers will be added to list #44 maintained in the Manual of Instructions.
Each item on the shipping ticket that has been tested will show the test report number, lot number, size, etc. Each item on the shipping ticket that has been approved by certification or mill analysis, will show the Certification Number, for the blanket approved items or brands. Items that are on the approved lists shall show the List Number and be identified by brand/product name and number. Visual inspection items and other similarly accepted materials shall have a statement of the acceptability and method. All materials for which the supplier has documentation shall be stamped, tagged or stenciled QA. Shipping tickets for approved materials will carry the statement “We certify that the above material has been approved for use on VDOT projects as per QA Program” or similar.

Items that have not been approved will not be allowed to be shipped on the same invoice as materials covered on the QA plan. The shipping ticket shall carry a statement that the material has not been approved for use on VDOT projects, and is being shipped at the Contractor’s risk. This material will not be acceptable for payment and the items should not be stamped QA. If approval of these items is received, written notification is to be furnished to the Contractor, Inspector, and monitoring District Materials Engineer.

For materials on the shipping ticket the documentation to be shown in the Materials Notebook shall be the shipping ticket number, along with the stated Certification Number, Test Number, List Number, or Visual Inspection for each item on the shipping ticket.

Materials supplied shall be subject to the same testing, certification, or other acceptance procedures as is currently required. The VDOT industrial inspector will continue to sample the materials, as needed, and will periodically audit the shipments to assure the invoices have the correct information, and that the materials shipped have been properly documented as materials acceptable for use on VDOT projects. One additional copy of the shipping document shall be provided to the monitoring industrial inspector for verification of materials being shipped. If the supplier does not provide proper documentation in a timely manner they will be removed from the Quality Assurance Program.

The Industrial Inspector will continue to provide inspections and verify warehouse stock is properly tested, stamped, stored, etc.

b) QA PLAN REVIEW FOR MISC. MATERIAL SUPPLIER

Minimum requirements in QA plan:

- Facility location, main phone number, web site, etc.
- Statement of commitment to program, purpose and mission.
- Personnel chart or organizational arrangement including assignment of responsibilities.
- Items supplied under this plan
- Copy of records retained for minimum of five years and a copy made for VDOT QA Technician.
- Statement of allowing VDOT access to necessary sampling and inspection.
- Action taken when new product is received.
- Summation of product storage.
- Material documentation process-
  - Certification/testing of product supplied by manufacturer
  - Material handling/movement of approved material
Labeling passing material
- How failed material is handled
- Information pertaining to size of lot, lot number, batch number, batch quantity and roll numbers, etc. if available
- Sample ticket should include:
  - Project Number.
  - Contractor information.
  - Description of material size, style and quantity.
  - Lot, Batch and/or roll Number.
  - Appropriate Lab Number if supplied by VDOT inspector.
- Sample ticket sent to VDOT project including the QA statement on the ticket.
- Authorized personnel must sign QA statement.

Sec. 112.02 Material Arriving Bearing Inspection Seals
Production control is not infallible, and does not replace the necessity of field inspection. In all cases, the material is to receive visual inspection immediately upon arrival in the field. When material arrives on the job bearing inspection seals or other identifying marks, indicating that the material has been plant inspected, such materials may be used on arrival at destination without delay, unless visibly defective or notification prohibiting its use has been received. See Sec. 109.03 for details of material certifications.

Inspection seals or other identifying marks that are attached to or received with a shipment of material, when it is received and accepted by the Inspector, must be removed from the railroad cars or trucks and the numbers recorded in the materials notebook with all other details concerning the material. See also Sec. 110.01 above and Sec. 800 for details concerning weigh tickets.

Sec. 112.03 Material Arriving Without Evidence of Inspection
Material that arrives at destination bearing no evidence that it has been inspected must not be used until approved. The District Materials Engineer is to be notified.

Sec. 112.04 Handling of Materials on Job
Tested and approved materials that are to be used immediately, or are stored improperly, upon arrival on the job should be given another careful visual examination before they are used. If any deterioration in condition, quality, or grading is evident, the District Materials Engineer is to be notified immediately. Coarse aggregates tend to segregate in transit and special care should be taken in handling. Conical stockpiles of aggregates are objectionable and should be avoided if at all possible. Should conical stockpiles prove to be detrimental to uniformity in mixes of hydraulic cement concrete or asphalt concrete, immediate steps should be taken to correct this situation.

Hydraulic cement must be stored to insure that it is kept dry. Any moistening of cement prior to its use, creating a lumpy and partially hydrated material, is to be cause for rejection of the cement.

Reinforcing steel stored on the job should never be placed in direct contact with the ground, but should be supported on timbers, etc., to keep it clean and dry. The location for storage should be one that will prevent the possibility of the steel becoming physically damaged in any way.
Any liquid or powder chemical materials stored on the job, such as concrete admixtures, curing compounds, paints, etc., should remain sealed in their original containers free from moisture or contamination, and at the manufacturer's recommended storage temperature, until used on the job.

Every effort should be made to properly handle and store materials on the job.

**Sec. 112.05 Proper Sampling in the Field**

See Sec. 201 for instructions on proper sampling in the field.

**Sec. 112.06 Information to be Submitted with Samples**

Detailed and complete information concerning each sample is absolutely necessary. The proper notification cards must be used, as outlined in Sec. 800, when submitting samples for test. The individual submitting the sample must sign the card in the space provided. Failure to fill out the sample notification cards completely will result in delay in making and reporting the tests, as the testing will not be done until necessary information has been obtained.

**Sec. 112.07 Procedure to be Followed when Material is Rejected**

Materials that do not conform to the specifications or requirements of the Virginia Department of Transportation are not to be used, unless authorized by the Engineer. The Materials Division will notify the Field Engineer of the failure of materials to pass the required tests. Whenever a Materials Technician inspects materials prior to shipment, and a seal is attached to the shipping vehicle, the load of material may be accepted on the job, after close visual examination for defects. Each Materials Technician is assigned a number of plants, and it is not possible to be at one plant at all times. It is, therefore, necessary that a visual inspection be made of each load of material as it arrives on the job. If Material is thought to be unsatisfactory after visual inspection at the job site, or there is indication that the material received does not conform to specifications, then the following procedure should be used:

(a) The Inspector should refuse the use of the material. It should be understood that the rejection of a material on a visual basis may not always be completely valid. For example, the Inspector may feel that a specification aggregate is either out of the grading or is contaminated; however, these factors cannot be determined without the benefit of a retest.

In other instances, however, visual inspection may completely suffice for the rejection of the material, if the material is unquestionably altered. An example of this would be a broken section of concrete pipe.

(b) The Inspector should then advise the Area Construction Engineer of the situation and the District Materials Engineer should be immediately notified.

(c) The District Materials Engineer will then investigate and provide a retest if necessary, such a retest being directed toward proper evaluation of the true character of the material (for example, the first case outlined in Paragraph (a) above). The Inspector will then properly record the situation by recording the developments in his diary.

It is most important that the Inspector at the job site promptly notify a supervisor and request confirmation of this judgment, in cases where material has been rejected on the basis of visual inspection. In almost every instance, in which an important component of the contracted work is rejected, the Contractor can be expected to question the basis for the rejection. Questioning of the rejection decision should not be taken as an attack upon the competence of the individual who rendered initial judgment. The Contractor's interest in the decision is motivated by the fact that it takes time to reorder material and replace workmanship. Before reordering replacement material, the contractor wants to be reasonably certain that our decision to "reject" is justified.
No one is expected to be an expert in the evaluation of the many materials which are used, even on an average highway project; therefore, it behooves the individual, whether they are serving in an Inspector or Engineer capacity at the project level, to call upon the appropriate "specialist" in the Department to render a decision of confirmation or who is otherwise able to offer a satisfactory explanation for the condition(s) which prompted the initial decision to reject the material.

Individuals cannot afford the luxury of acting solely on their own judgment in the rejection of materials and/or workmanship involving large sums of money and labor. The authority we have been given to "reject" is tempered with responsibility to fully evaluate that which is in question. Further, since time is important to both parties of the contract, we have the added responsibility to be prompt in seeking confirmation of our judgment.

The above procedure naturally does not apply to materials or workmanship which are obviously improper, defective, or not as specified. Examples include: incorrect size bars or location of bends in reinforcing steel, broken pipe, or unapproved substitutions involving the type of material specified. Neither does it apply to the rejection of "perishable" items; such as, hydraulic cement concrete which fails under test to conform to the specified requirements and which also fails under retest.

When material, purchased by the Contractor for contract work, has been found to be unsatisfactory for use, the Materials Division will inform the Area Construction Engineer of such, in order that he may notify the Contractor. Whenever it does become necessary to reject material or workmanship, field personnel should not become involved in suggesting or directing what course of action the Contractor should or must follow. Sec. 105.13 of the Road and Bridge Specifications says in part, "Unacceptable work shall be remedied or removed immediately and replaced in an acceptable manner at the Contractor's expense." Hence, there are at least two courses of action open to the Contractor (and perhaps more). He should be given an opportunity to decide which course of action he wishes to propose to the Department for our consideration, without having been unduly influenced at the outset. It may be that the only practical solution is to remove the work, but the Department's representative must not be guilty of jumping to this conclusion. At the outset, simply advise the Contractor that the work is unacceptable and that, after he has had an opportunity to study possible alternatives, the Department is to be advised of what he proposes to do to correct the deficiency.

When material, furnished on State orders, has been found to be unsatisfactory for use, the Materials Division is to notify the Administrative Services Division. Immediately upon receipt of such notice from the Materials Division, the Administrative Services Division will notify the Manufacturer that the material received has been rejected, due to failure to conform to its specification requirements, and will be held for the Manufacturer's disposal. A copy of this notice from the Administrative Services Division to the Manufacturer must be sent to the District Administrator, and from this point on the matter shall be handled by the Administrative Services Division and the Materials Division. In case of emergency, a request for permission to use the material is to be submitted to the Administrative Services Officer or Maintenance Engineer. A copy of such request should be sent to the Administrative Services Division and to the Materials Division.

When any material is found by tests or inspection to be unsuitable for use after sampling, the discrepancy must be corrected by the Contractor or Producer before the material is resampled and retested. This applies to any material which by nature lends itself to being manipulated or corrected after having once been made, placed, or used, regardless of any lapse of time afterwards. Materials, such as aggregate bases and subbases, select materials, and aggregates to be used in hydraulic cement concrete, would be included in this policy, whereas items, such as asphalt concrete or hardened hydraulic cement concrete, would not be included. This material, after correction, is to be resampled in the same location as that found to be in nonconformance with specifications on the original sample.
SECTION 113 REQUESTS FOR TESTS AND SERVICES

The purpose of this section is to set forth procedures for processing of requests for materials tests and services for other State agencies, local governmental units, other States, and Federal agencies. Although Sections 33.1-195, 5.1-49, and 5.1-50 of the Code of Virginia permit the Department to perform work for others, it is not intended that we solicit or otherwise promote such work.

Sec. 113.01 Performing Materials Tests and Services for Other State Agencies, Local Governmental Units, Other States, and Federal Agencies

Requests are to be made in writing and are to include a statement that the applicant is unable to contract the work within a reasonable time frame, or cannot find anyone else to perform the work. Requests are to be forwarded to the State Materials Engineer who will respond through the District Administrator.

In the event it is decided that the work can be undertaken without detriment to our schedule or increase in personnel, the District and/or Central Laboratory will prepare an estimated cost for the work and furnish same to the applicant. The appropriate payroll additive is to be included in the estimate for engineering services.

The applicant is to approve the estimate in writing and is to agree to pay the actual costs incurred. For work estimated to cost more than $5,000.00, a resolution from the governing body will be required.

Our written approval of work for others will include a statement that the work can be performed without detriment to our own materials program or necessitate an increase in personnel.

At the time test results and/or reports are transmitted to the applicant, a statement should be included asserting the understanding that the results and conclusions furnished are for the private use of the applicant. This will, hopefully, minimize our being drawn into controversy or having our work used to publicize some product.

The billing for work performed for other State agencies is handled by inter-agency transfer. All others are billed on an accounts receivable arrangement.

The Department does not have a legal or other basis for performing tests or services for Contractors, private businesses, or individuals, unless such need relates to its construction/maintenance program.

Sec. 113.02 Reciprocal Agreements where the Service is Performed Without Charge

According to our records, neighboring States have performed a considerable amount of plant inspection work for this Department without charge. Inasmuch as the services rendered to this Department currently equal and even exceed the services rendered to other States, it has been concluded that such routine inspection/testing services should be handled on an informal reciprocal agreement basis for those who wish to participate.

It should be understood that we are addressing work that can be performed as a part of our on-going inspection program with existing staff. The bulk of the work is prestress and precast inspection work performed by resident Plant Inspectors.

Sec. 113.03 Reciprocal Agreements for Services in which the Cost is Recovered/Paid

In the event there is a significant imbalance in the amount of work being performed by either State such that payment for the service(s) is deemed appropriate, the usual billing procedures are to be followed. Actual costs are to be documented using time sheets.

It should be understood that the Department reserves the unchallengeable right to refuse work requested, depending upon our availability at the time of the request. The State Materials Engineer's Office should be kept informed of requests and commitments involving work for other States.
SECTION 114 MATERIALS CERTIFICATION SCHOOLS PROGRAM

The Materials Certification Schools (MCS) Program is offered by a partnership between the Virginia Department of Transportation (VDOT), the Virginia Education Center for Asphalt Technologies (VECAT), Germanna Community College (GCC) and the Community College Workforce Alliance (CCWA) for individuals who wish to receive training and certification in the areas of Concrete, Asphalt Concrete, Soils, Aggregate, Pavement Marking, Slurry Surfacing and Surface Treatment. The goal is to provide on-going training in materials technology for industry and VDOT employees for the purpose of providing a competent workforce. These workers are involved in the production, utilization, acceptance, testing and inspection of materials used in the Commonwealth’s transportation infrastructure.

To attain this goal the Certification Programs objectives are:

- Provide technical training to VDOT and industry personnel.
- Enhance the teamwork and efficiency of VDOT, Industry, Municipalities, Testing/Inspection Agencies, and Consultants by training all individuals together.
- Support VDOT’s Construction and Maintenance Programs through provision of appropriate training.
- Support VDOT’s Quality Control and Quality Assurance Programs.

The roles and responsibilities of the program partners are as follows:

VDOT is the certifying body and retains ownership of all certification examinations as well as the establishment of all certification requirements. The Department also reserves review authority over all materials and instructors used in the presentation of the training program.

CCWA, GCC and VECAT will provide training locations and instructors for the instructor led training (ILT) as well as maintaining online training resources. They will also provide all training materials required as well as appropriate examination facilities.

Sec. 114.01 Specification Requirements

VDOT specifications require that the Contractor have present during the production, placement and testing of some materials a Certified Materials Technician. The following activities and the corresponding technicians summarize these specifications. Refer to the Virginia Department of Transportation Road and Bridge Specifications or the project contract documents for the actual specifications.

The production of Central Mix Aggregate requires the presence of a Certified Aggregate Plant Technician.

The Contractor shall have a Department-certified Asphalt Mix Design Technician for designing and adjusting mixes as necessary. The Asphalt Mix Design Technician or Asphalt Plant Level II Technician may perform testing of asphalt mixes.

The Contractor is responsible for having a Certified Concrete Plant Technician available during batching operations.

The Contractor shall have an Asphalt Field Level II Technician present during paving operations.
The placement of Slurry Surfacing requires the presence of a Certified Slurry Surfacing Technician. The placement of Concrete requires the presence of a Certified Concrete Field Technician. The placement of pavement markings requires the presence of a Certified Pavement Marking Technician.

The placement of Surface Treatment requires the presence of a Certified Surface Treatment Technician.

**Sec. 114.02 Certification Application**

All candidates for Certification in the VDOT Materials Certification Schools Program must read and sign an Application for Certification found in Appendix E.

**Sec. 114.03 Certification Titles**

**Sec. 114.04 Steps Required for Certification**
To obtain certification in a selected program the applicant must pass a certification examination and successfully complete any applicable proficiency examination (see following table *Proficiency Examination Requirements*).

The individual must successfully complete the proficiency examination in the same calendar year they pass the written examination. After successfully completing the written exam and the proficiency examination, a Certification will be awarded. The Certification is valid for five years. Expiration is five years from December 31st of the calendar year that the individual attended class. Students may print their own certification record from VDOT University. The web address is: https://VirtualCampus.VDOT.Virginia.gov.

Individuals are allowed a maximum of two attempts per calendar year to pass any specific written certification examination or any required proficiency examination. Two failures of either the written or proficiency exam will require the individual to start the entire certification process again the following year.

The Certification belongs to the individual, not their employer. Upon change of employment or location, the Materials Certification Schools Staff should be notified to update the student’s record.

Sec. 114.05 Maintenance of Certifications

Certification holders must complete all certification requirements every five years to maintain their certification.

Sec. 114.06 Extensions

Extension of certifications will be considered on a case by case basis and approved by the State Materials Engineer.

Sec. 114.07 Suspension of Certification

Certification is deemed to be a privilege that has been earned by an individual and may be suspended at any time if, in the opinion of the VDOT Technician Certification Review Board, an individual is thought to have knowingly committed acts that are detrimental to the integrity of the Certification Program or to the industry in general. All cases of potential certification suspension will be reviewed by the VDOT Technician Certification Review Board and they will recommend to the State Materials Engineer any action deemed appropriate. The State Materials Engineer will then make the final decision on what action will be taken, if any. The VDOT Technician Certification Review Board will be comprised of the following:

- The District Materials Engineer or designee (from District in which the incident occurs)
- The District Construction Engineer or designee (from District in which the incident occurs)
- The Materials Certification Schools Program Manager or designee

A suspension will be for a definitive amount of time as deemed appropriate based on the nature and severity of the infraction. Any individual who has their certification suspended will have to attend the appropriate Certification School and pass all required examinations to have their certification reinstated.

Acts that may result in suspension of certification include, but are not limited to the following:

- Falsification of field or quality control tests results and/or records
- Submitting false information that can be used for field or quality control test results
- Failure to perform specified duties
- Failure to follow appropriate testing or sampling procedures
- Display of any dishonest behavior during certification or re-certification

Any suspected inappropriate actions by an individual should be reported to the District Materials Engineer (DME) in the District in which the incident occurs. The DME has the authority to temporarily suspend an individual’s certification pending review by the VDOT Technician Certification Review Board. The DME will notify the Materials Certification Schools Program Manager, who will convene the VDOT Technician Certification Review Board. The Board will meet to review the incident as soon as practical. The individual will appear before the Board at that time.

Suspension of one Certification may be considered grounds for suspension of all Certifications held by the Technician. Further, any suspension of a Technician’s Certification in any other jurisdiction may result in the VDOT Technician Certification Review Board taking the same or other action, against a Technician’s Certification in Virginia.
Sec. 114.08 Program Instructors

Instructors for the program are provided by CCWA and GCC and may come from VDOT or private industry. Although instruction must comply with VDOT procedures and specifications, we welcome and encourage the participation of industry in all parts of the program.

Sec. 114.09 Program Evaluation

Examinations

Certification examinations are all “open book”, proficiency examinations are “closed book.” A valid photo ID must be presented prior to taking any examination.

The examination results of each class are compiled and analyzed on an annual basis by VDOT. Frequently missed questions are evaluated and addressed by some combination of clarifying the question, highlighting the information in the manuals, asking the instructor to highlight the information or revising the question.

Advisory Teams

At the end of each season, the teaching teams meet with the Materials Certification School’s staff and representatives of the appropriate training provider to discuss and evaluate the past year’s schools. Included in this meeting are various subject matter experts, both VDOT and Industry. Student evaluations and test results are compiled prior to this time and are presented at the meeting. From this information and the advice of the instructors, action plans are formed to adjust the teaching, curriculum, manuals and tests to best meet the needs of the students and VDOT.

Sec. 114.10 Study Guides

Study guides are provided by the training provider and are reviewed and revised annually. Technical Working Groups representing VDOT, industry and the training provider meet at the end of each school season to ensure the study guides contain accurate and up to date information. Changes or corrections are incorporated into the study guides before the next school season. VDOT reserves the right to review all training materials including study guides, presentations and online training courses.

Sec. 114.11 Scheduling

Scheduling is done by the training providers. Classes are generally held between January and the middle of April.

Sec. 114.12 Class Cancellations

Every effort will be made to hold classes; however, weather conditions or low registrations may be justification for cancellation of a class. The training provider will make every attempt to contact the students in the event of a cancellation. If the community college where the training is being held
closes due to inclement weather, the class will be cancelled also. If this happens contact the training provider to make other arrangements.

**Sec. 114.13 Fees and Refunds for Schools**

Fees and refund policies are established by the training provider and are subject to change. The fee includes course attendance, manual and other materials, the examination and one retest. Separate fees may apply for proficiency examinations.

**Sec. 114.14 Refunds**

This section has been removed.

**Sec. 114.15 Alternate Certifications**

VDOT will recognize NICET Construction Materials Testing Level II Certification in Soils. Individuals possessing a current NICET Construction Materials Testing Level II Certification in Soils will not need to obtain a VDOT Soils and Aggregate Compaction Certification. Similarly, VDOT will recognize NICET Construction Materials Testing Level II Certification in Concrete. Individuals possessing a current NICET Construction Materials Testing Level II Certification in Concrete will not need to obtain a VDOT Concrete Field Certification. Individuals not possessing a current NICET certification described above, have the option of obtaining the prescribed NICET certification or the applicable VDOT certification.
SECTION 115 MATERIALS TESTING REQUIREMENTS

Sec. 115.01 Personnel Qualifications

Materials testing will be performed by trained and qualified technicians/inspectors. A trained and qualified technician/inspector is defined as a person that holds a current valid certification through the respective Materials Certification Program. Technicians/inspectors and other Department personnel conducting acceptance tests not covered by a Materials Certification Program will perform testing in accordance with general guidance from the appropriate responsible District or Central Office Program Manager.
SECTION 116 NEW PRODUCTS EVALUATION COMMITTEE PROCESS

Sec. 116.01 Purpose/Mission
The intent of the New Products Committee is to accomplish the following:

a) Route vendors to a single authority thus improving uniformity and control of new products and reducing or eliminating work interruptions.
b) Provide appropriate, consistent and fair evaluation of all new products.
c) Provide centralized responsibility for evaluation, timely publication of results and establishment of a data bank.

Sec. 116.02 Definition of New Product
A **New product** is defined as an innovative product that will add value, improve quality, and/or increase performance and that is not covered by specifications, plans, special provisions or other departmental standards. A new product is not a product that simply costs less than a currently used material or will save the Department money without meeting or exceeding current engineering and/or quality standards. Generally the committee will limit the scope of its review to materials, which will become a temporary or permanent part of the highway system. Equipment, fuel, lubricants and other related items are not considered by this committee as new products and will be referred to the Equipment Engineer. Similarly, Computer software programs will not be evaluated by the New Products Committee but will be referred to ITD. Office supplies and related items will be referred to Administrative Services Division.

Sec. 116.03 Structure
The composition of the New Products Committee to at least one representative appointed by the Division Administrator from each division of the following discipline: Materials (chairman), Maintenance, Construction, Structure and Bridge, Research Council, Environmental, Location and Design, and Traffic Engineering.

The chairman has regularly scheduled meetings twice a year in April and October. Additional meetings will be scheduled as necessary.

Sec. 116.04 Process and Procedures
The evaluation process follows the six basic steps:

1) **Initial Screening** - All vendors wishing to have their product considered must submit a New Products Application/Evaluation form to the chairman. The application may be found online at: 

The chairman, will recruit a subject matter expert or form a subcommittee to perform initial investigation of the new product evaluation requests. The subcommittee will screen the product and determine if the product meets the definition of a new product and make a recommendation for further review or rejection to the full committee. These subcommittee recommendations will be presented to the New Products Committee at the regularly scheduled meeting. The full committee will decide upon further review or rejection of the product as appropriate.
2) Preliminary Examination – The vendor at his/her option may appear before the committee to present any additional information or visual aids. The vendor may also schedule and provide a field demonstration through a member of the committee/subcommittee. The committee will consider any laboratory data made available by the vendor or secured from other sources during step 1 and 2. A product will not be evaluated until a valid Material Safety Data Sheet is provided.

3) Detailed Evaluation (Laboratory & Field) – When a New Product has passed the preliminary examination phase and approved by the committee, it shall be submitted for laboratory and/or field for testing. Generally the vendor will be expected to furnish samples at his cost for laboratory testing and the Department will purchase materials for field installations. The Department’s laboratory and/or field results will be the deciding factor for acceptance of the product. The entire committee will have input into the evaluation process.

4) Writing Specifications, Procedures, etc. – After laboratory and/or field tests are completed and evaluated and the committee approves the product, the chairman will have appropriate acceptance requirements and procedures written and the product will be added to the Special Products Evaluation List (SPEL).

5) Assembly and Dissemination of Information – The chairman will be responsible for establishing a new products data bank and keeping the information up-dated. Additionally, the committee will publish an updated Special Products Evaluation List (SPEL) at least annually.

6) Performance Evaluation – When the Department uses a new product, it is mandatory that the committee be notified of its use by submission of a Performance Evaluation Form furnished by the committee.***

*** The largest problem facing the New Products Committee is failure to notify and include the committee during field installations so a proper documented evaluation can be performed.

The procedures established for utilizing a new product on specific projects/schedules without processing through the New Products Committee are outlined below:

1) A designer/engineer may provide, for the use of a new product in a contract on an optional basis, provided the Division/District Administrator approves such use prior to advertisement. This practice should be limited in scope and number of installations to those necessary to provide meaningful evaluation. The use of a new product by a designer/engineer must be reported to the New Products Committee so that the committee may have input to the evaluation effort and include the product in its process.

2) A contractor may introduce a new product under Section 105.05 of the Road & Bridge Specifications with approval of the Engineer. Further Section 104.02 sets forth a procedure whereby the contractor may submit a value-engineering proposal, which could involve the use of a new product. The use of a new product by a contractor must be reported to the New Products Committee in order that the committee may have input to the evaluation effort and include the product in its process.
To provide a succinct, visual depiction of the process, the following flow chart illustrates the process.

I-C-1
Nuclear Moisture - Density Gauges

District Administration

PART IA - GENERAL REQUIREMENTS

Operators/Operations of Nuclear Gauges

1. No individual shall operate a nuclear gauge until the individual has attended and passed a nuclear safety class.
Reference: Code of Federal Regulations (10 CFR, Part 20)

2. No individual shall operate a nuclear gauge until the individual has been issued a Thermoluminescent Dosimeter (TLD) to monitor the gauge operator’s exposure levels. Only the individual to whom the TLD is assigned shall wear it.

3. No individual under 18 years of age will operate or be allowed to work in the vicinity of the Department’s nuclear gauges.
Reference: Virginia Department of Transportation Manual of Instructions, section 105.02

4. For a declared pregnant woman, exposure doses shall not exceed 0.5 rem (0.005 sievert) during the entire pregnancy to avoid any damage to the embryo/fetus.

5. No operator shall use the gauge in such a manner to impose any undue exposure to themselves or the general public at any time.
Reference: Code of Federal Regulations (10 CFR, Part 20, sec. 20.1302), Virginia Department of Transportation Manual of Instructions, sec. 105.02
Appendix E – Application for VDOT Materials Technician Certification

APPLICATION FOR VDOT MATERIALS TECHNICIAN CERTIFICATION

This is to affirm that _____________________________________ (Technician’s Name), hereinafter “Technician,” desires to be certified by the VDOT as a (an)_______________________________________(Name of Certification desired). By making this Application, Technician acknowledges and agrees that Certification carries inherent rights and responsibilities. The rights include being exclusively sanctioned, along with others so certified by VDOT, to perform sampling, testing, and reporting of test results for quality acceptance, quality control and assurance programs. The responsibilities include performing and reporting tests with the accuracy and precision expected of the Technician in accordance with the required test procedures.

By signing this Application, Technician agrees to strive to maintain compliance with all rules, regulations, specifications, industry standards, procedures, and policies, applicable to any work performed under the Certification. A violation of the above as determined by the VDOT Technician Certification Review Board may result in a suspension or revocation of the rights and responsibilities conferred on the Technician. Revocation or suspension of one Certification may be considered a revocation or suspension of all Certifications held by the Technician. Further, any suspension or revocation of Technician’s Certification in any other jurisdiction may result in the VDOT Technician Certification Review Board taking the same or other action, against Technician’s Certification in Virginia.

By signing below, Technician also affirms that he/she is aware that both State and Federal laws may govern construction projects in Virginia, including Title 18, United States Code, Section 1020, that states, in pertinent part, that anyone making falsifications on Federal-aid projects, “Shall be fined not more than $10,000 or imprisoned not more than five years, or both.”

I, ___________________________(Print Name), affirm that I have read and fully understand the foregoing “APPLICATION FOR VDOT TECHNICIAN CERTIFICATION,” and I agree to be bound by these terms.
