

On Wednesday January 8, 2014 PCES v3.1 will be placed into production on the PCES website. Following is a summary of the changes made from the previous version (v3.0):

PCES v3.1 (Jan 8, 2013)

1. Version name changed from v3.0 to v3.1.
2. Added the new inflation for FY 2014.

To effect the change, all users will need to download their existing estimate(s), upload each estimate in the new version of PCES, and select the uploaded estimate as the recommended estimate. If you no longer have Excel 2003 installed on your computer, you must save the workbook as a 2003 version and then upload the converted version to the PCES web site. PCES still works on the old Excel version and has not been converted to Excel 2007. The file will not upload unless this is done, you will receive an error message.

PCES will support the upload of workbooks in v3.0 through February 1, 2014. After that time, PCES users will only be able to upload and recommend v3.1 of the workbook.

Please share this information with any users of PCES in your district/division/local that may not be in the above distribution list.
