Subject: Average Noise Barrier Material and Installation Costs

Based on current noise barrier pricing information, the average cost for noise barriers has been updated. The changes are based on the three most recent years of historic data. The statewide average cost for noise barriers is \$42 per square foot (\$/SF). This estimate only includes noise barrier material and installation costs, so any additional costs such as utility relocation, ROW acquisition, earthwork, etc. should be accounted for separately. The updated average cost is to be used for all noise studies effective immediately.
